

Satellite radio is the wave of the future.

I am tired of waiting for several minutes for traffic/weather reports.

I have a long commute and use channel 217 for Chicago every single day.

I also enjoy XM's programming. The variety is great for my whole family. Where else can I get an entire channel of 40s radio?!?!

If the AM/FM radio stations can't keep up... that's completely their own problem!

Support satellite radio.

In addition, you can look to satellite radio to curb illegal downloading, a huge problem!
